

AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application.

1. (Previously Presented) A filing notebook comprising:
a cover including a front leaf and a back leaf;
a binder joining the front and back leaves together;
inner notebook pages connected to the binder between the front and back leaves, wherein the notebook pages are detachable; and
inner separation sheets with tabs inseparably connected to the binder for filing notebook pages separated from the binder in respective compartments created by the inner separation sheets.
2. (Previously Presented) The filing notebook of Claim 1, wherein each notebook page includes a scored line that is parallel to the binder, in proximity to the binder, and along which the notebook page can be detached in order to file the notebook page in a compartment between two adjacent inner separation sheets.
3. (Previously Presented) The filing notebook according to Claim 1, wherein the inner separation sheets are located between the notebook pages of the notebook and the back leaf.
4. (Previously Presented) The filing notebook according to Claim 1, wherein the tabs are located at different heights on the inner separation sheets.
5. (Previously Presented) The filing notebook according to Claim 1, wherein the front leaf invisibly covers the tabs of the inner separation sheets when the notebook is closed.
6. (Previously Presented) The filing notebook according to Claim 1, wherein the front leaf makes the tabs of the inner separation sheets visible and directly accessible when the notebook is closed.

7. (Previously Presented) The filing notebook according to Claim 1, wherein one of the front and back leaves includes flaps along upper, lower, and side edges.

8. (Previously Presented) The filing notebook according to Claim 1, including at least one closing means for keeping the notebook closed and including an elastic band fastened to one of the front and back leaves by rivets, sliding relative to the leaf via eyelets, and for pulling over a corner of the back or front leaf parallel to the binder.

9. (Previously Presented) The filing notebook of Claim 8, wherein the closing means can be pulled over a corner of the inner separation sheets.

10. (Previously Presented) The filing notebook according to Claim 1, wherein the binder includes a spiral.

11. (Previously Presented) The filing notebook according to Claim 1, wherein the notebook pages are perforated for filing in another notebook.

12. (Previously Presented) The filing notebook according to Claim 1, wherein compartments between the inner separation sheets can receive pages other than the notebook pages.

13. (Previously Presented) The filing notebook according to Claim 1, including at least one closing means for keeping the notebook closed and including an elastic band fastened to one of the front and back leaves by rivets, sliding relative to the leaf via eyelets, and for pulling over the front or back leaf and parallel to the binder.

14. (Previously Presented) The filing notebook of Claim 8, wherein the closing means can be pulled entirely over the inner separation sheets.

15. (Previously Presented) The filing notebook according to Claim 4, wherein the front leaf invisibly covers the tabs of the inner separation sheets when the notebook is closed.

16. (Previously Presented) The filing notebook according to Claim 4, wherein the front leaf makes the tabs of the inner separation sheets visible and directly accessible when the notebook is closed.

17. (New) A filing notebook comprising:
a cover including a front leaf and a back leaf;
a binder joining the front and back leaves together;
inner notebook pages connected to the binder between the front and back leaves,
wherein the notebook pages are detachable;
inner separation sheets with tabs inseparably connected to the binder for filing
notebook pages separated from the binder in respective compartments created by the inner
separation sheets, wherein the inner separation sheets are located between the notebook pages
of the notebook and one of the front and back leaves; and
at least one closing means including an elastic band fastened to one of the front and
back leaves by rivets sliding relative to the leaf via eyelets, wherein the elastic band is
adapted to be pulled over the inner separation sheets.
